

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A digital camera system comprising:
  - a first digital camera; and
  - a second digital camera;
  - the first digital camera comprising:
    - a first input/output device that sends/receives data to and from the second digital camera;
    - a first plurality of operating devices;
    - a first detector that detects an operation of any of the first plurality of operating devices; and
    - a second controller that controls the first digital camera based upon an operation of any of the first plurality of operating devices; and
  - the second digital camera comprising:
    - a second input/output device that sends/receives data to and from the first digital camera;
    - a second plurality of operating devices;
    - a second detector that detects an operation of any of the second plurality of operating devices;
    - a judgment device that judges which detection result was first detected, a detection result of the second detector or a detection result of the first detector input via the second input/output device; and
    - a first controller that controls the first digital camera based upon an operation of any of the second plurality of operating devices when the judgment device judges

that the detection result of the second detector was detected prior to the detection result of the first detector;

wherein when the first digital camera ~~detects the~~ detects an instruction about taking a photograph from the first controller while the first digital camera is controlled by the second controller, the first digital camera stores the instruction about taking the photograph from the first controller and only executes the instruction about taking the photograph from the first controller, which is stored in the first digital camera, after completion of the control of the first digital camera by the second ~~controller~~ controller, and the instruction about taking the photograph is at least one of an exposure condition to take the photograph, a light metering to take the photograph, White Balance (WB) condition to take the photograph, a shooting lens position to take the photograph, a zoom lens position to take the photo, a shutter speed to take the photograph, an aperture value to take the photograph, chromaticness to take the photograph, a shooting sensitivity to take the photograph, edge enhancement value to take the photograph, a compression ratio to take the photograph, a number of recording pixels to take the photograph and a time setting to take the photograph.

2. (Withdrawn) The digital camera system set forth in claim 1, wherein when the judgment device judges that the detection result of the first detector was first detected prior to the detection result of the second detector, the first controller is prohibited from controlling the first digital camera.

3. (Previously Presented) The digital camera system set forth in claim 1, wherein the second controller is prohibited from controlling the first digital camera while the first digital camera is being controlled by the first controller.

4. (Previously Presented) The digital camera system set forth in claim 1, wherein the first controller is prohibited from controlling the first digital camera while the first digital camera is being controlled by the second controller.

5-83. (Canceled)
